

# Feeling "at Home"

One of our ambitions is to have folks feel at home in this bank; to cultivate geniality and good will; to promote that feeling that the Home Bank and Trust Co. is a HOME institution, ready to serve our home people at all times. You will always find a welcome here; you are entitled to our time and attention, whether you bank here or elsewhere.

## Home Bank and Trust Co.

CHARLTON DuRANT, President  
T. M. WELLS, Cashier

### FAILURE OF SWINE TO REPRODUCE IS CAUSE OF SERIOUS LOSS

Failure in the ability or desire of swine to reproduce may be caused by any of several conditions, say specialists of the United States Department of Agriculture. It may result from a disease or injury that seriously affects or destroys the secretory reproductive organs. It may be caused by improper functioning of the system, which in turn is often brought about by unsuitable feed or faulty elimination of waste products, or it may be due to a general lowering of body vitality.

**Make Examination to Find Cause.**  
There are also cases of sterility or impotence for which definite causes are difficult to find. "Pigs to breed" quite frequently occur in boars and sows which have been fitted and kept in high condition for show purposes. In some instances the sow fails to come in heat, or perhaps indicates that she is in heat and is successfully served by the boar without resulting conception. In other cases the boar shows no desire to mate, or acts ineffectively.

The first step in overcoming the trouble is to find a positive cause, when possible, by making a thorough examination. This should include a search for physical defects, the presence of disease, the results of injuries, or lowered vitality from any cause.

When, from such examination, it appears that proper treatment will prove successful, remedies should be administered promptly. But if the cause is obscure, or if there is little likelihood of correcting the defect successfully, it is best to remove the animal from the breeding herd. Boars may be castrated and fitted for slaughter as market hogs. Similarly, sows should be discarded when they become uncertain breeders.

When there is no apparent cause for failure of swine to mate, experts of the United States Department of Agriculture frequently have observed a lazy or sluggish temperament. These hogs generally are of the type known as "hot-bloods." They are fat and show an unwillingness to exercise. The tendency is more common in mature hogs and increases with age. Careless and unwise inbreeding practices tend to produce hogs of this type, but inbreeding does not necessarily bring about the condition.

When the lack of sexual vigor is soon in only an occasional animal it may be possible to recognize the fault in blood lines or type. But when failure to mate occurs frequently and when the type is right, the indications are that the system of management is fundamentally wrong.

**Reduce Fat-Producing Feeds.**  
Upon the appearance of this condition an effort should be made to correct it by a restriction or modification of the diet and an abundance of exercise. The ration must have the fat-producing feeds largely reduced and protein feeds plentifully supplied. Pastures should be provided where

possible, but when these are not available then the ration should consist of alfalfa meal, alfalfa, soy-bean, or clover hay to supply protein and vitamins, high-grade tankage, fish meal, linseed meal, or a good grade of white middlings and whole oats—with but small amounts of corn or ground barley, together with a good mineral mixture. In addition an abundance of daily exercise must be given. This will probably have to be forced by driving the boar or sow about the paddocks or pastures daily until the animal is tired.

By maintaining the digestive functions in a proper manner, by causing abundant exercise and by supplying proper nourishment, there will be brought about a proper elimination of the body wastes and a rebuilding of the tissues. This should cause the reproductive organs to function properly and bring about a toning up of the system in such manner that breeding operations will be successfully conducted. But in some cases of impotence of long standing even these measures fail.

Swine breeders must be alert to the necessity for ruggedness in herd boars in addition to other qualifications. Breeders must refrain also from too great a degree of fineness and smoothness in the selection of their breeding animals, or loss of breeding power will ultimately develop in their herds.

### EXPOSITION BUILDING TO BE ERECTED SOON

Charlotte, N. C., May 23.—The Exposition building for the Carolinas Exposition, Inc., will be erected by the Jones Construction Company of this city. Contract was signed this morning and calls for an expenditure of \$60,000. The building will be of modern fireproof construction and will be 200 x 200 and contain 40,000 square feet of floor space.

The contractor agrees to turn the completed building over to the Exposition Company not later than August 20.

## WATCH THE BIG 4

**Stomach-Kidneys-Heart-Liver**  
Keep the vital organs healthy by regularly taking the world's standard remedy for kidney, liver, bladder and uric acid troubles—

**GOLD MEDAL  
HAARLEM OIL  
(CAPSULES)**

The National Remedy of Holland for centuries and endorsed by Queen Wilhelmina. At all druggists, three sizes. Look for the name Gold Medal on every box and accept no imitation.

Additional floor space will be provided in a frame structure 150x250 to be erected immediately adjoining and connecting with the permanent building, and the building committee was instructed by the board of directors at the meeting this morning to have plans prepared for this building immediately so that contract may be let as early as possible.

The building site is splendidly situated immediately west of the city. A spur track of the Piedmont and Northern Railway will run into the building and two trolley lines run nearby and roads approach from all sides. All these roads will be put in good condition before the Exposition is held. Parking space for automobiles will be provided in a fenced enclosure surrounding the building.

The board of directors is composed of John L. Dabbs, president; G. L. Etheredge, H. C. Miller, A. B. Alexander, Jr., Norman A. Cooke, J. B. Efrid, Joe G. Fitzsimons, David Owens, J. C. Patton and C. W. Parker. The building committee is composed of C. L. Etheredge, chairman; R. K. Blair and R. E. Seagins.

### MEXICAN BEAN BEETLE MAY SPREAD WIDELY THIS YEAR

Indications that the Mexican bean beetle is likely to spread widely during the coming summer possibly to northeastern Georgia and the Chattanooga district, and to cause great damage to crops in the present infested area in northern Alabama is reported to the Bureau of Entomology United States Department of Agriculture, by one of its agents in the field. The insect pest is said to be appearing in such numbers in the district about Birmingham, Ala., as to indicate that 20 to 25 per cent successfully passed hibernation. Entomologists look upon this as a remarkably high overwintering percentage, which bodes ill for the crops this year.

Organization of work by the department for preventing the spread of the pest and discovering, if possible, some means for its control and eradication is nearing completion. A field station has been established at Birmingham, and specialists assigned to the various phases of the undertaking, including quarantine and regulatory work. The situation is much graver in view of the fact that the insect last year, in its new environment, began feeding upon a new food, cowpeas—an important southern crop—destroying as much as 30 to 35 per cent in some fields last autumn. The pest is said to have no known effective parasite or other natural enemies that would aid in keeping it under control, although larvae and eggs are occasionally destroyed by natural enemies in the West.

The first egg this year is said to have hatched about the middle of March, due to the early spring and the mild winter. Continuous breeding until late autumn is looked for with the probability of four or five generations instead of two or three, as is usual under normal conditions in the Rocky Mountain region, from which the insect has come.

## WEAK, NERVOUS, ALL RUN-DOWN

Missouri Lady Suffered Until She Tried Cardui.—Says "Result Was Surprising."—Got Along Fine, Became Normal and Healthy.

Springfield Mo.—"My back was so weak I could hardly stand up, and I would have bearing-down pains and was not well at any time," says Mrs. D. V. Williams, wife of a well-known farmer on Route 6, this place. "I kept getting headaches and having to go to bed," continues Mrs. Williams describing the troubles from which she obtained relief through the use of Cardui. "My husband, having heard of Cardui, proposed getting it for me. I saw after taking some Cardui that I was improving. The result was surprising. I felt like a different person."

"Later I suffered from weakness and weak back, and felt all run-down. I did not rest well at night, I was so nervous and cross. My husband said he would get me some Cardui, which he did. It strengthened me. My doctor said I got along fine. I was in good healthy condition. I cannot say too much for it."

Thousands of women have suffered as Mrs. Williams describes, until they found relief from the use of Cardui. Since it has helped so many, you should not hesitate to try Cardui if troubled with womanly ailments. For sale everywhere. E. 83

### SIMPLE WAY TO PREVENT LEATHER FROM MILDEWING

Any leather article is almost certain to mildew if kept in a warm, damp, and dark place, such as a closet, cellar, or stable. This mildewing probably will not reduce seriously the serviceability of the article, unless it is allowed to remain on the leather too long. It may, however, change the color appreciably, thus injuring the appearance. The simplest way to prevent mildewing, say specialists of the United States Department of Agriculture, is to keep the leather in a well-ventilated, dry, well-lighted place preferably one exposed to the sunlight. Mildew can not make much headway in the sunshine. When mildew develops, it should be washed off with soap and warm water, or simply wiped off with a moist cloth, drying the leather well afterwards. These simple measures are preferable to the application in the home of preparations designed to prevent the growth of mildew.

We are proud of the confidence doctors, druggists and the public have in 666 Chill and Fever Tonic.

### COTTON WAREHOUSES APPEAL FOR LICENSES

There has been a marked increase in the demand for cotton warehouse licenses during the past year. In the administration of the United States warehouse act 242 such licenses were issued since July 1, 1920, by the Bureau of Markets, United States Department of Agriculture, and applications were received for 289. During the previous year 106 applications were received and 24 licenses issued.

### NOTICE

Notice is hereby given that lands in Santee swamp, Clarendon County, between the Sumter-Clarendon county line on the north and Jack's Creek and Stave Island on the south, formerly owned by the Santee River Cypress Lumber Company is now leased to the Brooklyn Cooperage Company of Georgetown, S. C. Hunting, fishing, and grazing rights on the above area have been leased to J. J. Broughton, etc., of Pinewood, S. C. By Woods Superintendent.

### NOTICE OF DISCHARGE

I will apply to the Judge of Probate for Clarendon County, S. C., on the 20th day of June, 1921 at 11 o'clock a. m. for Letters of Discharge as Administrator of the Estate of Peter L. Holliday, deceased. Young A. Holliday, Administrator. Mannin, S. C., May 17, 1921 pd.

The next time  
you buy calomel  
ask for

**Calotabs**

The purified and refined calomel tablets that are nausealess, safe and sure.

Medicinal virtues retained and improved. Sold only in sealed packages. Price 35c.

The increased interest in the licensing of cotton warehouses is thought by department specialists to be due largely to the following facts:

The Atlanta Federal Reserve Bank is actively encouraging warehousemen to become licensed and bonded under the United States warehouse act and a co-operative agreement has been entered into with the Georgia State Bureau of Markets whereby the State bureau furnishes a free grading service to all licensed warehousemen who desire it. The governor of the Federal reserve bank at Dallas has recently taken an active interest in the act and is circulating member banks in his district in advocacy of the Federal system of warehouses.

Very substantial reductions in the rates of fire insurance on licensed warehouses have been granted by the various rating bureaus in the South. In a majority of Southern States this reduction amounts to 25 per cent from the scheduled rates; in other Southern States the reduction ranges from 25 per cent on certain classes of warehouses to 10 per cent on others. Ten per cent is the minimum concession. The Federal Farm Loan Board has approved forms of receipts to be used under the regulations and steps have been taken to secure like approval from the Federal Reserve Board.

## "That Tired Feeling" Often Forecasts Sickness

When you are tired without good cause, lack ambition and feel out of sorts generally, you may be heading straight for a sick spell. These symptoms often show the whole system, especially the blood, is disordered.

Don't wait 'till you are sick in bed. Almost every ailment can be ward off if attended to in

time. Any doctor will tell you that. Start at once to drive impurities from your system and help enrich your circulation with famous S.S.S., the vegetable blood tonic of fifty years' standing. Get S.S.S. from your druggist today, and write about your condition to Chief Medical Advisor, 847 Swift Laboratory, Atlanta, Georgia.

USED 50 YEARS
